Specific Disease or Condition:  
Gastroesophageal reflux disease

Information from experts who specialize in the disease or condition.

Consideration of whether conventional medical therapies are insufficient to treat or alleviate the disease or condition.

Proton pump inhibitors, the main non-surgical treatment for GERD, are known to prevent vitamin B12 intake, which causes bones to become brittle over time. The likelihood of breaking hips, wrists, and other bones significantly increases when taking PPIs for an extended period of time

Evidence supporting the use of medical marijuana to treat or alleviate the disease or condition, including journal articles, peer-reviewed studies, and other types of medical or scientific documentation.
